### The code

```
1  $\langle *code \rangle$   
2 \LdfInit{croatian}\captionscroatian
```

When this file is read as an option, i.e. by the `\usepackage` command, `croatian` could be an ‘unknown’ language in which case we have to make it known. So we check for the existence of `\l@croatian` to see whether we have to do something here.

```
3 \ifx\l@croatian\@undefined  
4   \@nopatterns{Croatian}  
5   \adddialect\l@croatian0\fi
```

`\captionscroatian` The macro `\captionscroatian` defines all strings used in the four standard documentclasses provided with  $\text{\LaTeX}$ .

```

`\extrascroatian` The macro `\extrascroatian` will perform all the extra definitions needed for the Croatian language. The macro `\noextrascroatian` is used to cancel the actions of `\extrascroatian`.

63 %

We specify that the croatian group of shorthands should be used. These characters

are ‘turned on’ once, later their definition may vary.

```
64 \addto\extrascroatian{%  
65   \bbl@nonfrenchspacing}
```

For Croatian texts `\frenchspacing` should be in effect. We make sure this is the case and reset it if necessary.

```
66 \addto\noextrascroatian{%  
67   \bbl@nonfrenchspacing}
```

```
68 \ldf@finish{croatian}  
69 \code>
